Introduction

Reliability and long life due to highest quality.

The Zehnder Pumpen GmbH is a prestigious German manufacturer of diverse pumps and units for water supply, sewage disposal and wastewater treatment.

The utilisation of our products in whole Europe and beyond documents the trust of our partners and customers, as well as the flexibility and quality of our work.

Our experienced employees in all areas ensure branded products with high customer satisfaction by their own high demands to 'Made in Germany'.

At the same time, continuous development strengthens our position on the market.

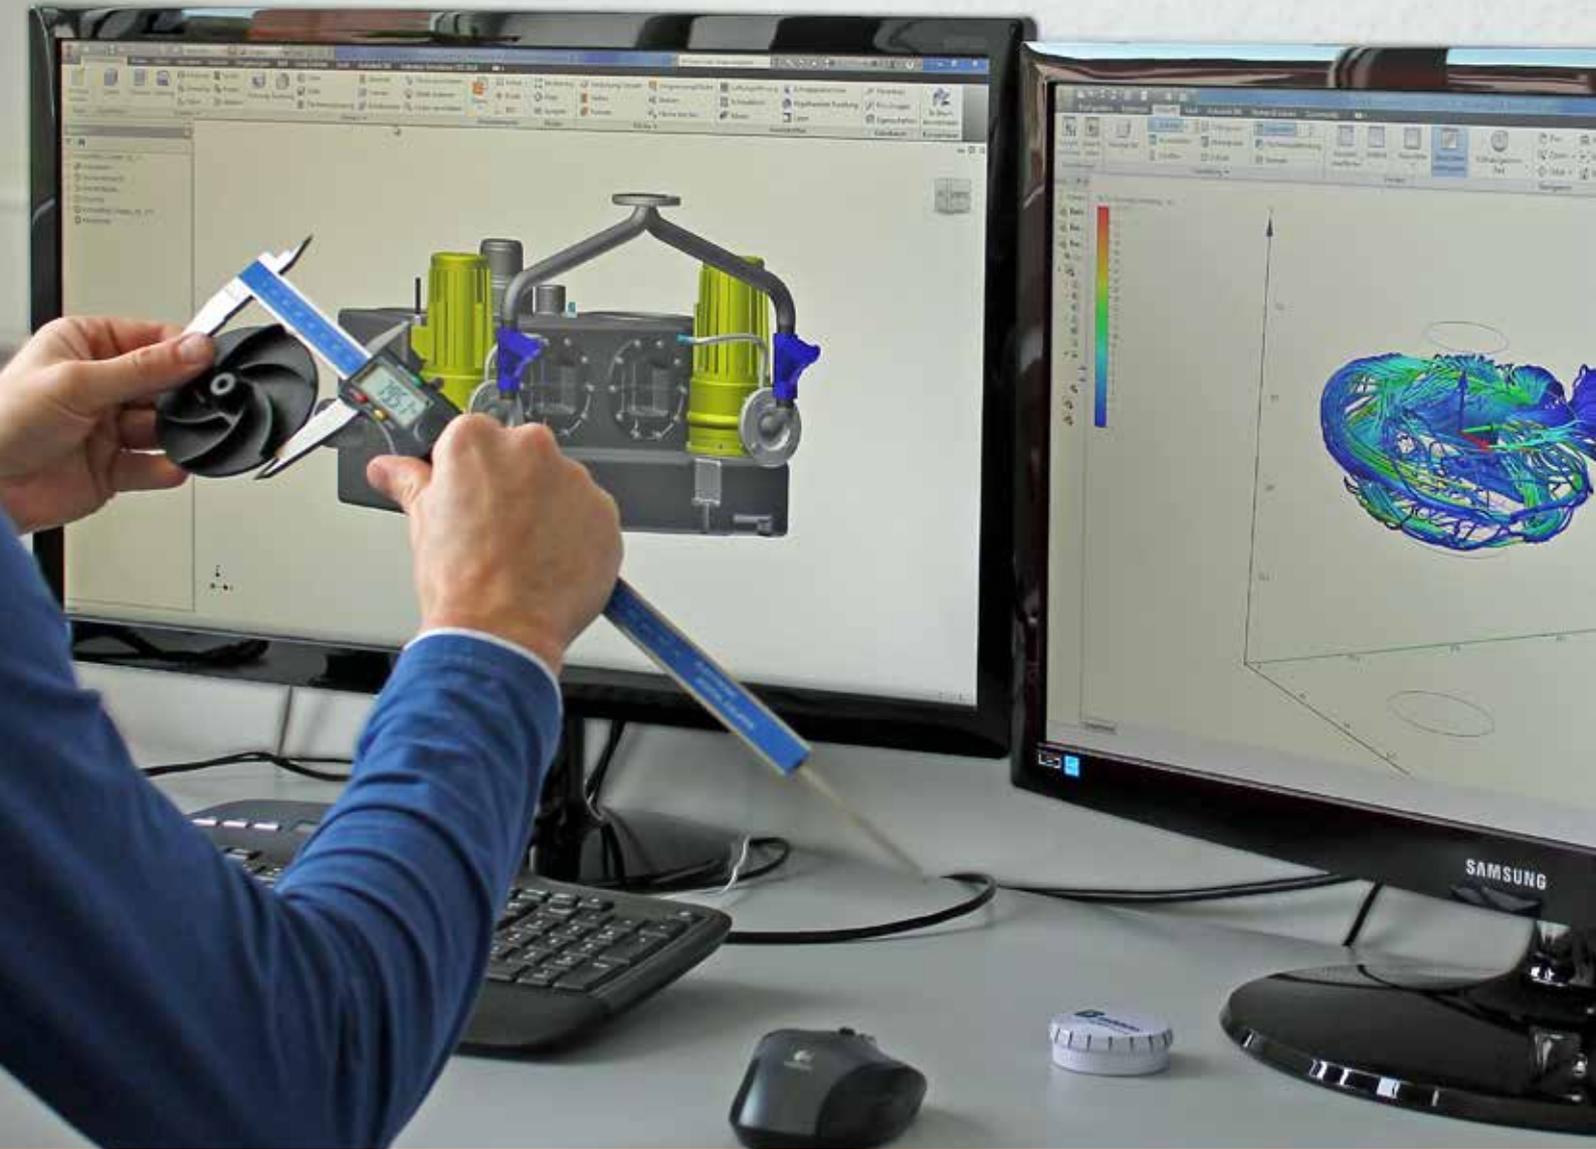

Besides the technical properties of our products, service is our top priority.

By means of targeted qualification of our partners, we guarantee a high standard in the after-sales area.

On the following pages, we would like to give you an overview of our company.

We would be pleased to introduce our extensive product and service range to you personally.

Development, Design, Production: from the idea to the finished product – everything from a single source

● 1976

Establishment by change of firm name from Zehnder Mechanik to Zehnder Pumpen in Frankfurt a.M., start of the production of sewage lifting units and submersible pumps

● 1994

Commissioning of another manufacturing plant in the area of the electrical motor factory EMGR in Grünhain-Beierfeld.

● 2001

Relocation of the head office of Zehnder Pumpen GmbH from Frankfurt a.M. to Grünhain-Beierfeld

● 2007

Takeover of the consolidated companies - Zehnder Pumpen GmbH and EMGR Grünhain- by the MS Industrie AG

● 2010

Orientation towards growth due to new shareholder structure: WMS Wachstumsfonds Mittelstand Sachsen, MS Industrie AG and MuM Industriebeteiligungen

Production plant in Grünhain-Beierfeld

Continuous quality controls guarantee our high product standards

Flexibility

You only reach maximum customer benefit and corresponding sustainability by means of flexibility. Short ways and inter-divisional teamwork, as well as strong local partners enable us to react quickly to individual customer requirements – even for small quantities.

Integrity

We cultivate long-term and honest relationships with our business partners and customers. For us, responsibility and trust go hand in hand. These values establish the basis for continuous success – not only for us, but also for our partners.

Quality

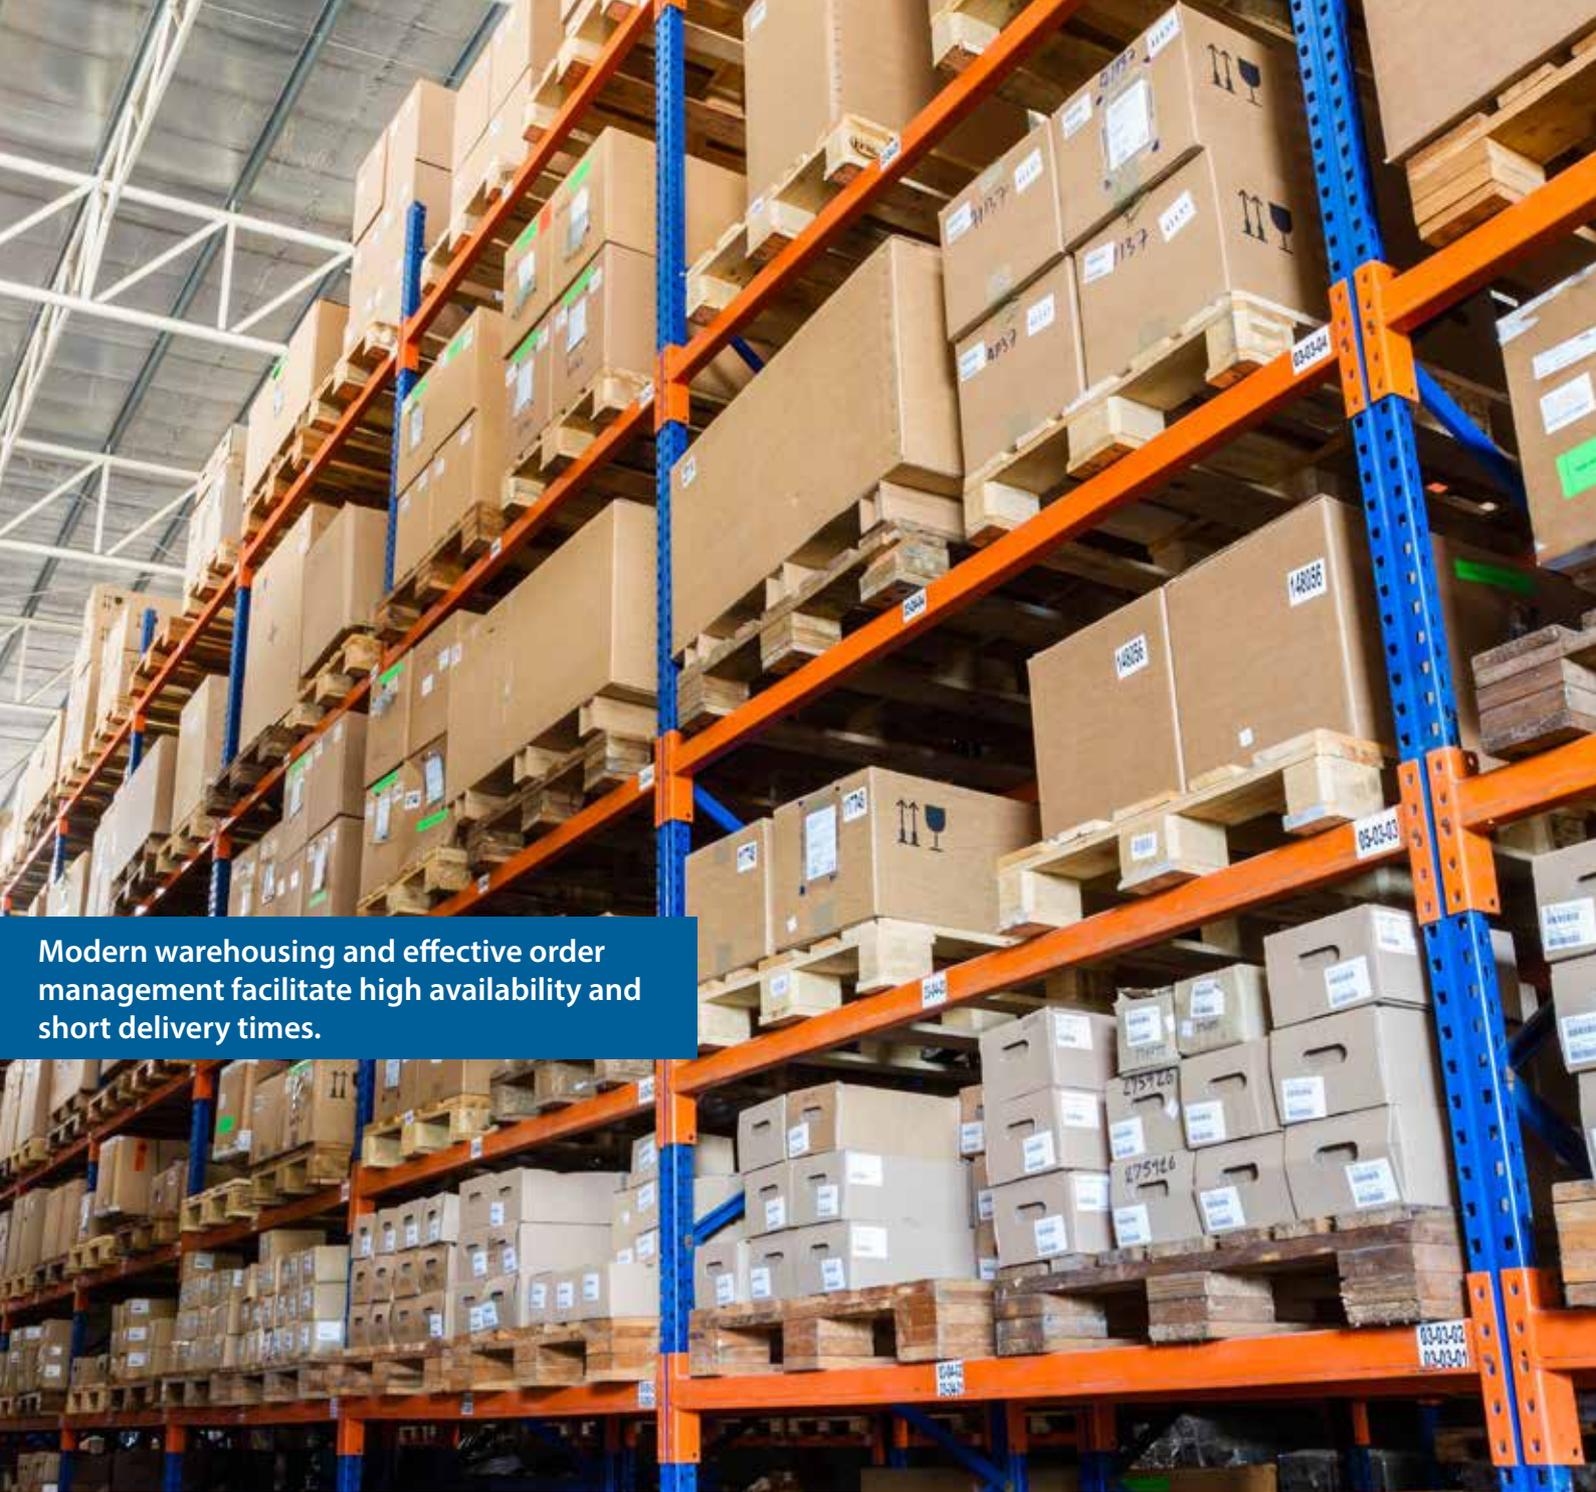

By courtesy of more than 35 years of successful business on the national and international market, we own the required experience and competence for the production of high-value products. We are not resting on our laurels, but improve our products using permanent further development and targeted quality management. Continuous education of our service centers and assemblers assure reliable support beyond the sale.

Versatility

We have a comprehensive assortment width. From pumps for domestic use, over industrial and municipal applications to special customised solutions – we provide products for multifaceted requirements.

Customer proximity

The relation to our customers is the centre of our acting. By means of professional, technical consulting, we are at your disposal for orders and order processing – provide quick and straightforward support for repairs and complaints. On-site support by our sales representatives is a natural part of our high service orientation.

Modern warehousing and effective order management facilitate high availability and short delivery times.

The product portfolio of Zehnder Pumpen includes more than 1.000 items.

Especially engineers and installers benefit from the Zehnder-philosophy - offering pump units and pump systems always as complete packages with all necessary accessories. The pre-assembled delivery is a real competitive advantage on the market because it saves time during planning, projecting and installing. Furthermore the continuous value-added chain enables quick and flexible solutions for customer-specific requirements.

- **Submersible pumps made of polymer, stainless steel and cast iron**
- **Switch panels and controls**
- **Grease separators**
- **Wastewater lifting units**
- **Pumping stations**
- **Sewage lifting units**
- **Sludge suction cleaners**
- **Borehole pumps**
- **Pressure booster systems**
- **Synthetic containers**
- **Non-return valves and much more**

Continuous value-added chain

There are many good reasons for 'Made in Germany'. In our particular case it means 'Made in Saxony'. Here in the Saxon Ore Mountains, the electrical industry and metal processing have a long tradition. Therefore highly qualified specialists, service personnel and sales professionals know what they are talking about and most of all – what they are doing. Not only the production is situated in our location in Germany, also the suppliers are located in our region and secure the value-added chain by means of high-quality components.

In-house production

Pumps made by Zehnder Pumpen are real branded products. Since decades they are likewise popular with industrial companies and private house owners because of their robustness, persistence, efficiency and low maintenance. To keep it this way, we willingly maintain the overview. At Zehnder Pumpen, development, production, sales, service and logistics are carried out from a single source. It goes without saying that we are using exclusively immaculate materials and components.

Strong partnership with electrical motor factory EMGR Grünhain

For more than six decades, EMGR Grünhain has established itself as a specialty supplier for innovative electric drives. Since 1993 the experts for customer-specific electrical motors belong to consolidated companies together with Zehnder Pumpen GmbH. A strategic partnership from which the customers can only benefit. Development and production with more than 250 employees on a common location assure constant exchange and short distances.

BAHNHOF POTSDAMER

The metro Berlin is used by ca. 1,4 mio. passengers every day. We equip a high number of Berlin's metro stations with the latest pump technology, e.g. the metro station 'Potsdamer Platz'.

Our sewage lifting units are installed in the train station [Amsterdam Centraal](#), the main station of the Dutch metropolis. They are contributing to a smooth operation in a heavily stressed traffic junction.

In the visitor magnet [Gondwanaland](#) – part of the prestigious 'Zoo Leipzig' – pressure booster system from Zehnder Pumpen ensure a sufficient water supply of the artificially created tropical world every day.

In [Mechelen](#), Belgium 130 RWNA rainwater harvesting units are used in a newly established residential estate. Therefore the residents do not only save valuable potable water, but also reduce their energy costs significantly.
